

Game Your Video

“Stop editing videos, start gaming them!!!”

User Manual

Follow us on:

Preface

Game Your Video is a live video recording and editing app developed for iPhone 4, 4S, 5 and iPod touch platforms with different video filters, audio filters, instant effects and soundtracks available for live recording. It provides a complete set of gamification tools to make your video editing process enjoyable and delightful.

You can also render your recorded videos or videos present in Camera Roll, by getting into Game Your Video module. Now personalize and game even your everyday boring videos and give them a magic touch.

Videos can also be cut to remove unwanted parts and joined to include several other videos so that your precious moments are not scattered in bits.

There is also a feature to watch and save your recorded videos in Reverse. Reversed videos can also be supplemented by Audio files present in your Music library.

The latest version also provides a **Split Screen** feature to play and render 2 videos together on a single screen.

We have integrated a community for all our users so that you can showcase your skill in gaming videos. You can view it through “Popular Videos” community.

You can view the list of recorded videos and videos from Camera Roll in the customized Media Library. A custom player is provided to play the videos listed in Media Library.

You can always share videos to sites like Facebook and YouTube.

Got the hang of it? Then let's get started...

What's New in Game Your Video v2.0?

Some of the new features that Game Your Video encapsulates include:

1. Redefined New Flavors:

Game Your Video v2.0 brings to you 3 new exciting flavors along with its own soundtrack, video filters and auto-instant actions:

- i. Zombie.
- ii. Sci-Fi.
- iii. Hip-Hop.

2. 4 new instant actions:

You everyday videos are about to get extra-ordinary!!! If the existing instant actions weren't enough, we have added 4 new instant actions to the list.

[Click here](#) to know more about them.

3. UI refinements and Cosmetic changes:

We have made several minor improvements in order to make it simpler to record, edit and share your creations.

Hence, you can now enjoy using our app more than ever before.

Getting Started with Game Your Video:

Game Your Video UI:

Game button: Tapping on this button brings up the **Media Picker** library for selecting a particular video to edit.

Record button: This button directly opens up the **Recording** screen. Hence, you can directly record videos and tap on “Done” button to return back to this screen.

Media Library¹: Tapping on this button opens up the customized Media Library to view all captured videos and also videos from Camera Roll.

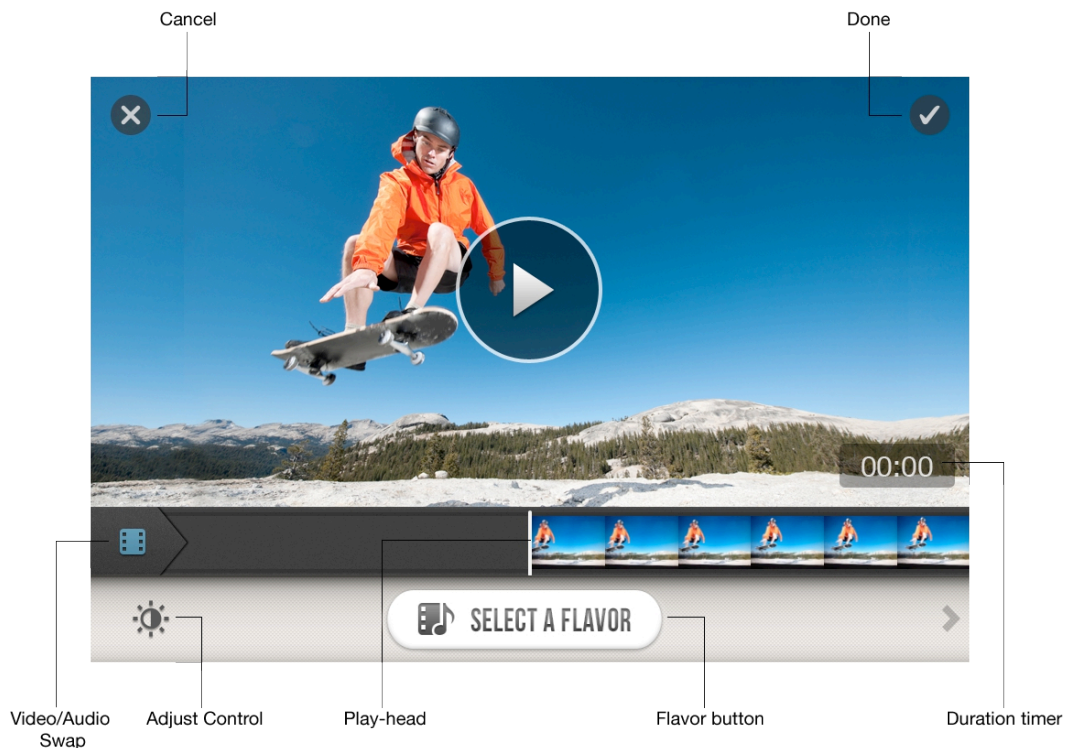

Popular Videos: Tapping on this button opens up a list of user-uploaded videos to the community.

Settings: Tapping on this button opens up **Settings** page. The About page has also been integrated within the Settings page from v2.0.

Notification: This page includes the latest news, update information, contests, videos, happenings and much more...

Store button: Opens up a **Store** page wherein in-app purchases can be made.

¹ Media Library supports long-tap option and hence can be distinguished from Media Picker.

Post-Edit screen:

Timeline¹: The Timeline displays a series of thumbnails for the video to be edited. You can swipe the Timeline to go forward or back in time. It presents a static Play-head that shows the current position of the video.

Play-head: The Play-head is static in nature and cannot be dragged. It is a point from where a particular instant effect can be added and removed.

Video/Audio Swap: Tapping on this button toggles the Timeline to display Video-instant effects or Audio-instant effects applied, respectively.

Flavor button: Tapping on the Flavor button in the bottom bar opens up the flavor grid. You can select and apply a particular flavor for the entire video.

Adjust Control²: Tapping on Adjust Control button swipes the bottom bar to show the brightness, contrast and saturation buttons along with a Slider.

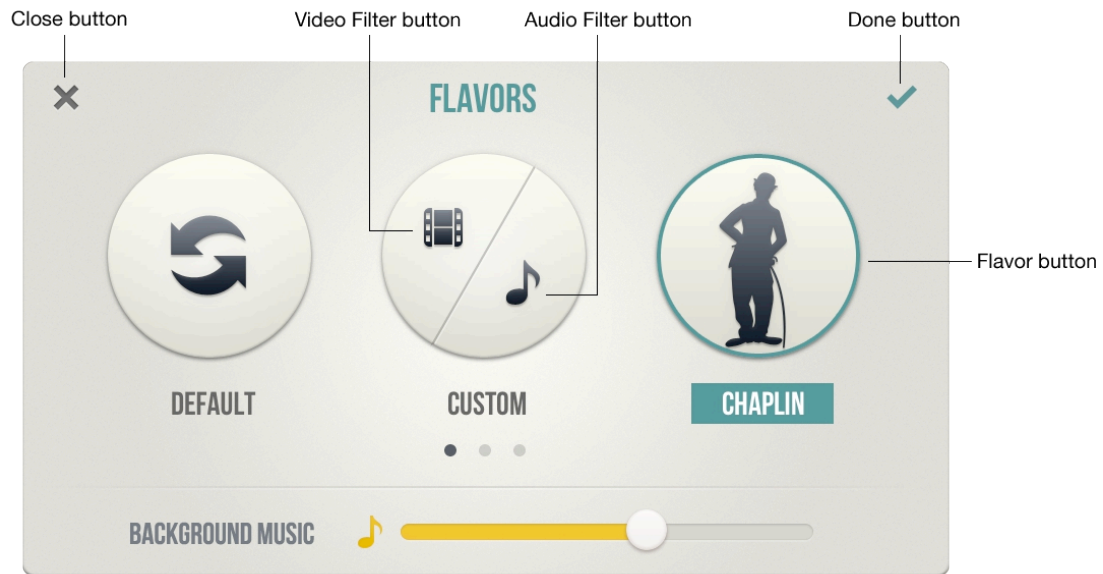

Duration timer: The duration timer displays the elapsed time for the selected video.

Cancel button: Closes the Post-edit screen.

Done button: Tapping on the Tick mark initiates the rendering process for the edited video.

¹ Timeline only shows video or audio effects applied at a particular time.

² Applying Adjust control and Filters applies to the entire video.

Flavor grid:

“Select a Flavor” button: Tapping on this button displays a list of flavors in pages, which can be swiped. Selecting a flavor¹ automatically selects a video filter and audio soundtrack along with it.

Custom Flavor: It allows you to select any video filter or audio filter or both, based on your preference. It is divided into 2 buttons:

i. Video Filter button: Tapping on the Video Filter button opens a list of video filters in pages.

ii. Audio Filter button: Tapping on the Audio Filter button opens a list of audio filters. There is also iPod music and soundtracks to choose from. You can even adjust the volume of iPod music.

¹ Funny Talks flavor does not have any video filter or custom soundtrack.

Instant actions¹:

Icon	Name	Description
	Fast Forward	Shortens the duration of video by half
	Slow Motion	Doubles the duration of video
	Echo	Creates sequences of the last recorded frame
	Jitter	Jitters the preview screen window similar to old movie effects
	Lens	Distorts the preview lens to create an effect
	Mirror	Creates symmetry between objects in the preview
	Inset	Generates 3 screens in the same preview, all of different sizes
	Zoom	Creates auto-zoom on the preview objects
	Invert	Flips the color for white and black objects
	RGB Split	Creates red, green and blue shades for objects
	Flashback	Changes the preview to Black & White
	Shake	Creates a shake effect on the preview

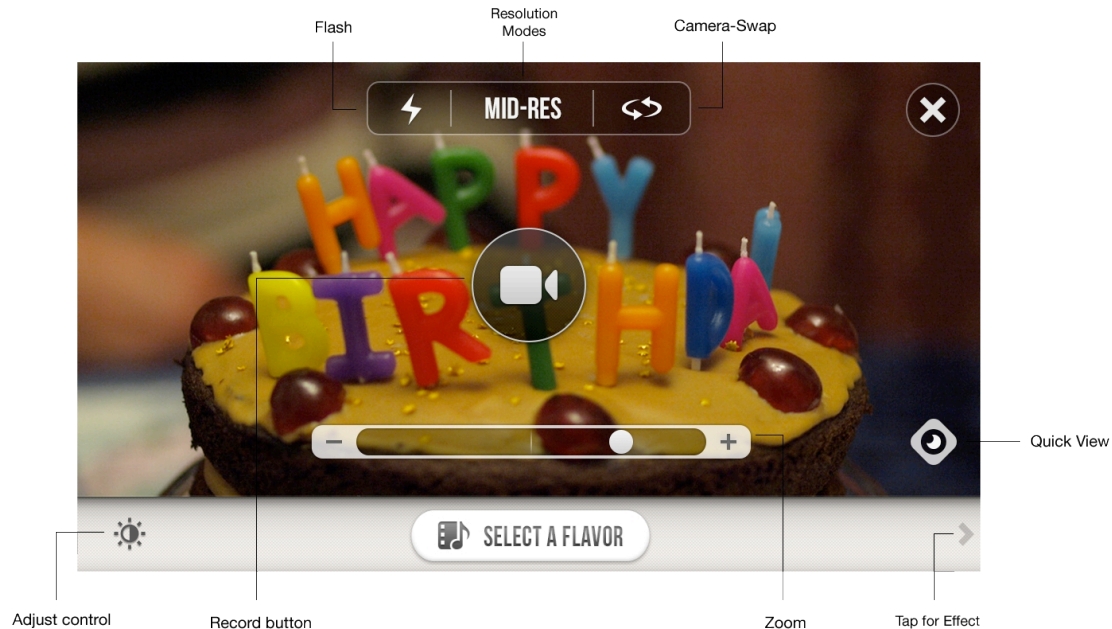

¹ Instant actions are mapped according to the flavor used. Hence all instant effects will not be available if flavors are used. Some instant actions are available for Post-editing only.

Icon	Name	Description
	Spin	Spins the preview in a 360-degree angle
	Line Art	Creates an art effect on the preview
	Pixelate	Pixelates the entire preview screen
	Boom	Graphics that appear on the preview
	Heart	
	Smiley	
	Kiss	
	Applause	Sound clips that can be added while editing a video
	Fail	
	Twang	
	Boing	
	Giggle	
	Laugh	
	Claps	
	Boo	

Icon	Name	Description
	Chipmunk	Audio filters that can be toggled
	Echo	
	Scary	
	Baby	
	Voice Over	Adding your own voice at a specified time on a video being edited
	Beats	Alters the video preview in beats.
	Color	Adds random color flashes to the video.
	Pulse	Creates a fade zoom effect.
	Fluid	Creates a Fluid effect onto the video.

Live Recording:

Tapping on the Record button at the center starts video recording. You are also provided with Pause feature, so that your video recording experience is not hindered.

The supplementary controls provided are as follows:

Flash: Tap to switch On/Off the LED Flash. (Available only on iPhone 4, 4S, 5 and iPod touch 5G)

Camera-Swap: Tap to switch between front and rear cameras.

Slide to Exposure: Slide your finger across the screen to adjust the Exposure control.

Tap to Focus¹: Tap on the screen to bring the focus on the object.

Zoom²: The live preview can be zoomed in and out, as required.

Adjust control: Tap or swipe to bring adjust control options in the bottom bar.

Game Your Video also supports 3 recording modes:

1. HD mode³. (Resolution is same as default supported by your iPhone or iPod)
2. High-res mode (Resolution is 640x480 i.e. 480p)
3. Mid-res mode (Resolution is 480x360 i.e. 360p)

¹ Tap to focus feature is provided only for supported devices.

² Digital zoom up to 5x is supported for front and rear cameras for high-end devices.

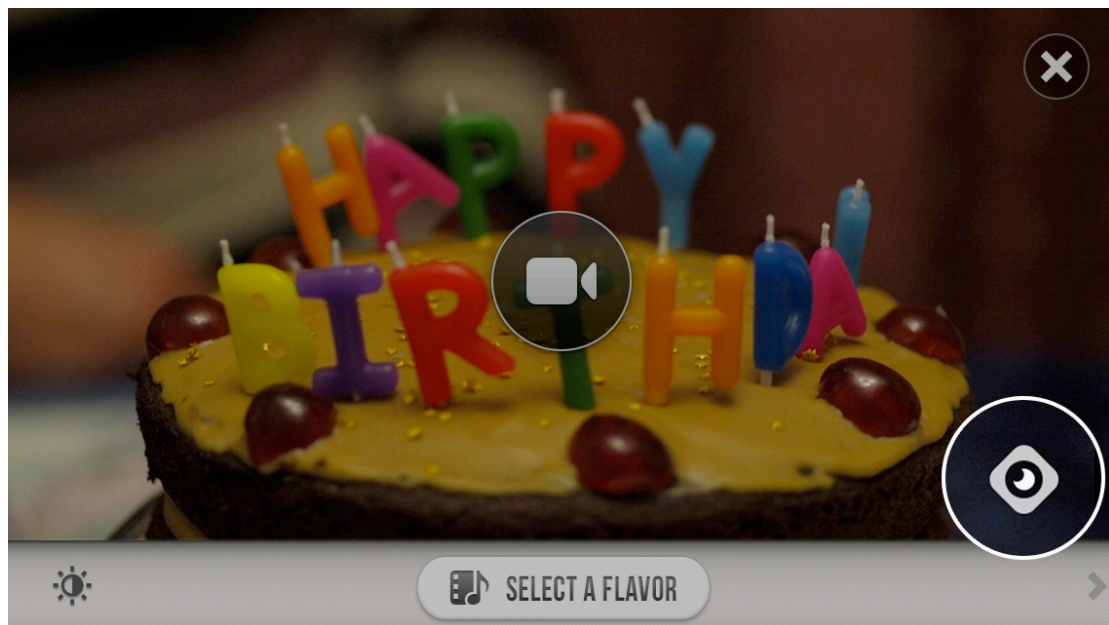

³ HD mode will not provide you with any live filter, zoom or effects.

Important notes:

1. You can change recording modes by tapping once on the preview screen and selecting the appropriate recording mode. **However, recording modes cannot be changed in front camera preview.**
2. You can apply multiple flavors during live recording. However, this can be done by pausing the live recording and changing filters.

Quick View:

Now you do not have to go back to the library from Recording screen for watching your last recorded video. Simply, tap on Quick View button and view your recent recorded video. It's really that easy!!!

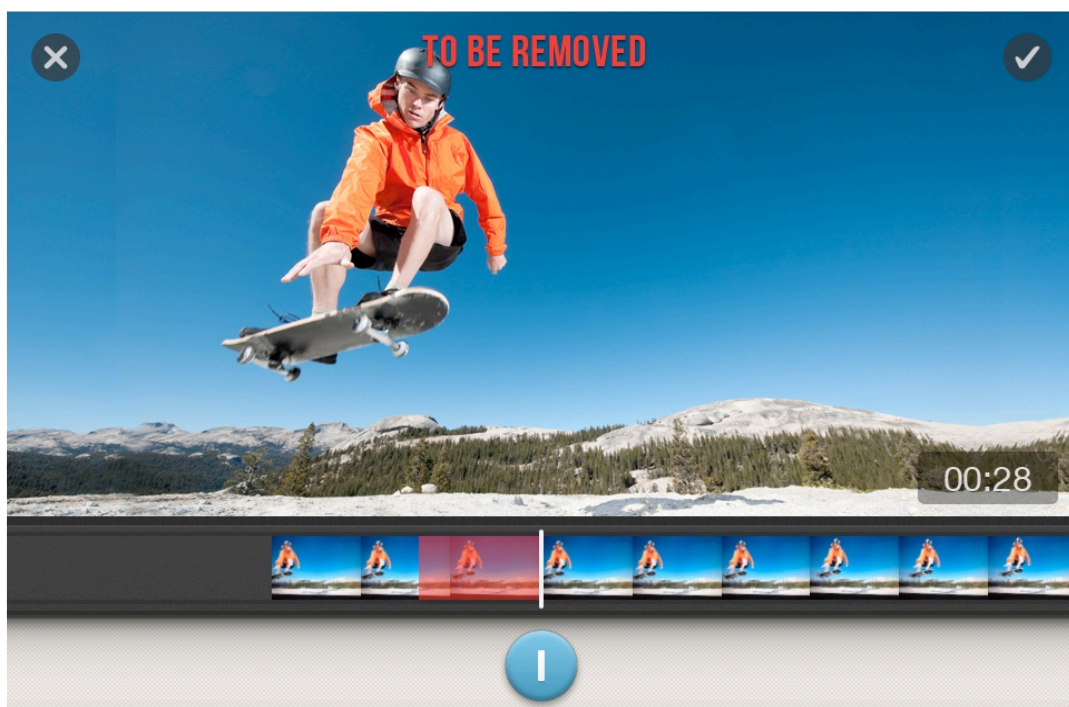

CUT & JOIN:

As the name suggests, Cut feature is useful for removing unwanted parts from the video. Join, on the other hand, clips two or more selected videos from Media Picker.

A Cut button is provided in the bottom bar which when tapped highlights the video frames present in Timeline while the video keeps playing.

When a specific portion to be cut is highlighted, tap on the Cut button again to deselect it.

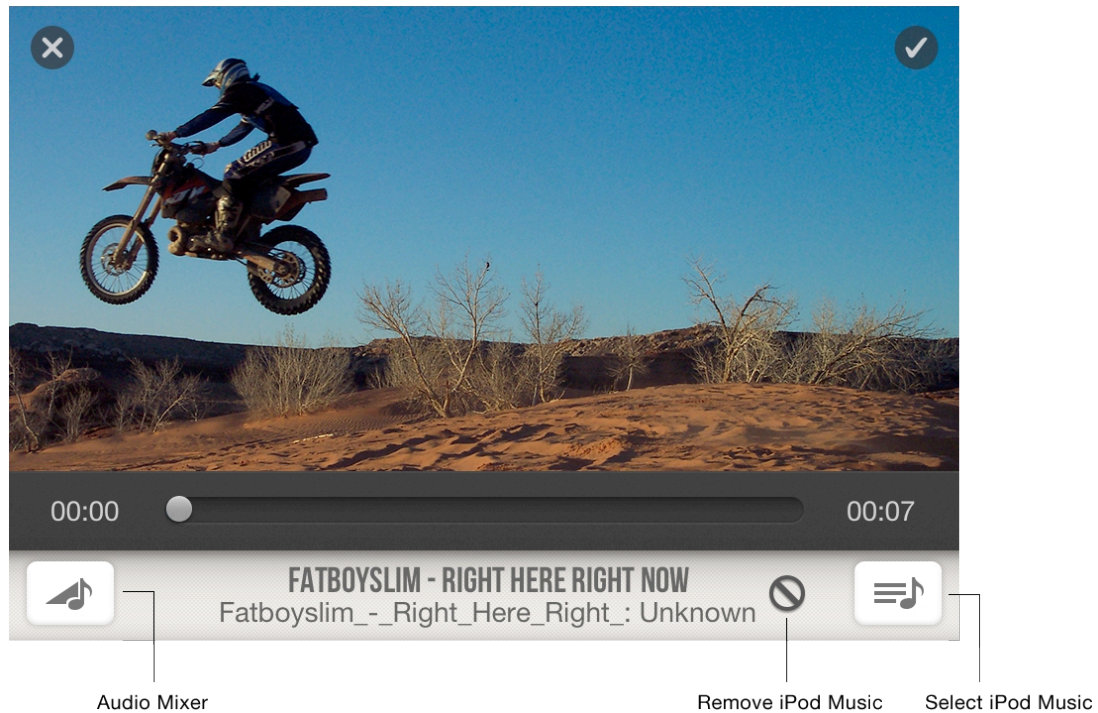

There is also a notification text **“TO BE REMOVED”** denoting the specific portion, which will be removed from the Rendered video.

Join will automatically merge selected videos and play it in Edit screen.

The bottom bar in Join shows the following buttons:

1. **Select iPod Music:** Used to add background track.
2. **Remove iPod Music:** Removes previous selected background track.
3. **Audio Mixer Control:** Helps in controlling the volume of iPod music with respect to original audio.

Reverse:

Reversing any video is just a step away. Select any video to reverse. The reversed video appears in the View screen (same as Join screen). You can also apply background tracks as seen in Join mode.

Split-Screen:

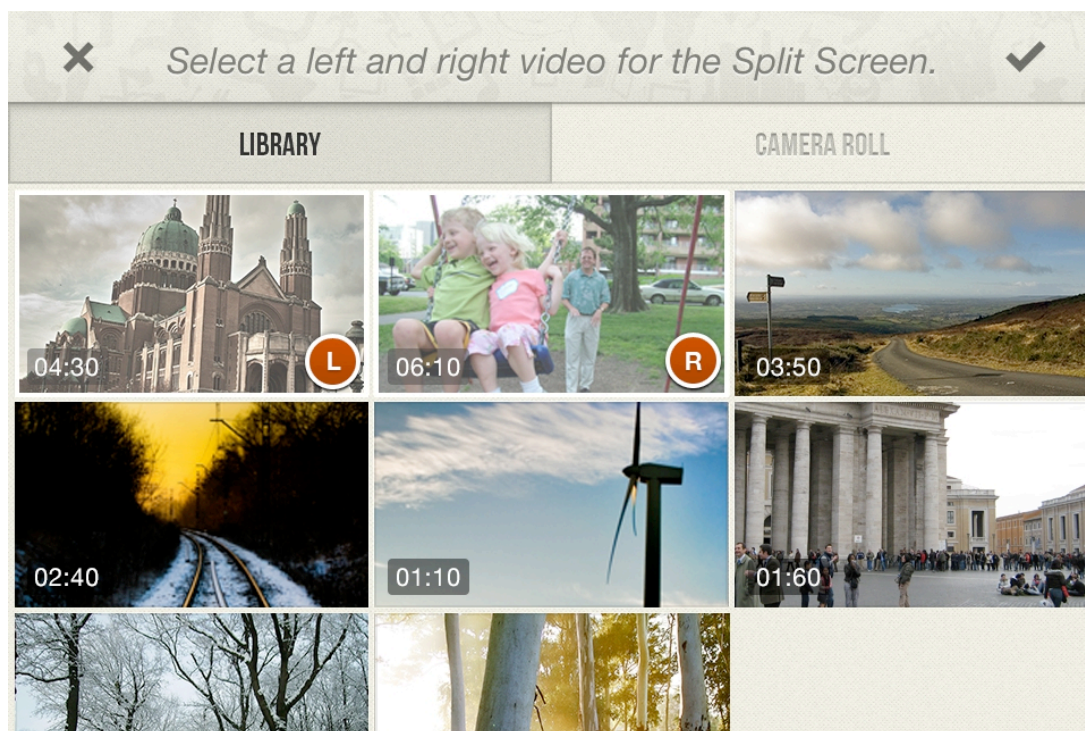

Everyone likes watching videos wherein more than one video plays at once. With Split Screen, you can now create one for your own. The results will definitely blow your mind. Split-Screen not only allows you to play 2 videos simultaneously, but you can also render them together if you like the combo.

Note: Videos selected for Split-Screen will not have any audio.

However, you can also add background Music directly from your iPod library.

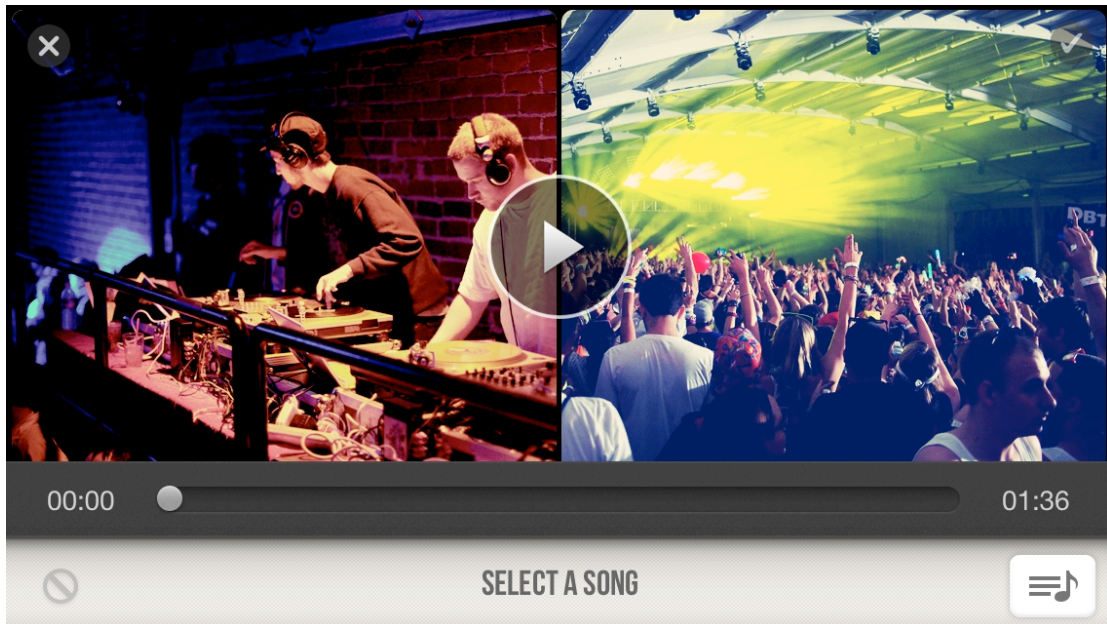

Here are the steps for creating your exciting Split-Screen video:

1. Select two videos from Media Library.

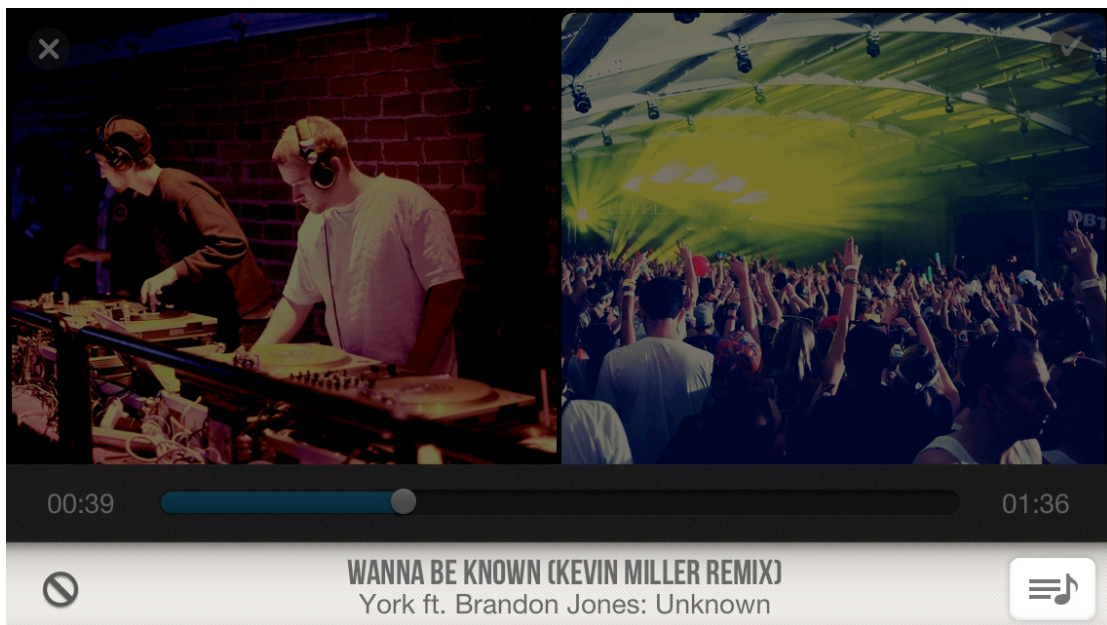

An L (Left) and R (Right) indication can be seen for the selected videos. These videos will appear on the left or right side of the screen respectively.

2. Now tap on the **“Tick”** icon and the selected videos will open in Split-Screen view.

3. You can now directly play this video. Both the videos will play together in the same screen.
4. If you want to add background music, simply tap the button present in the bottom bar. The selected song name will appear in the bottom bar.

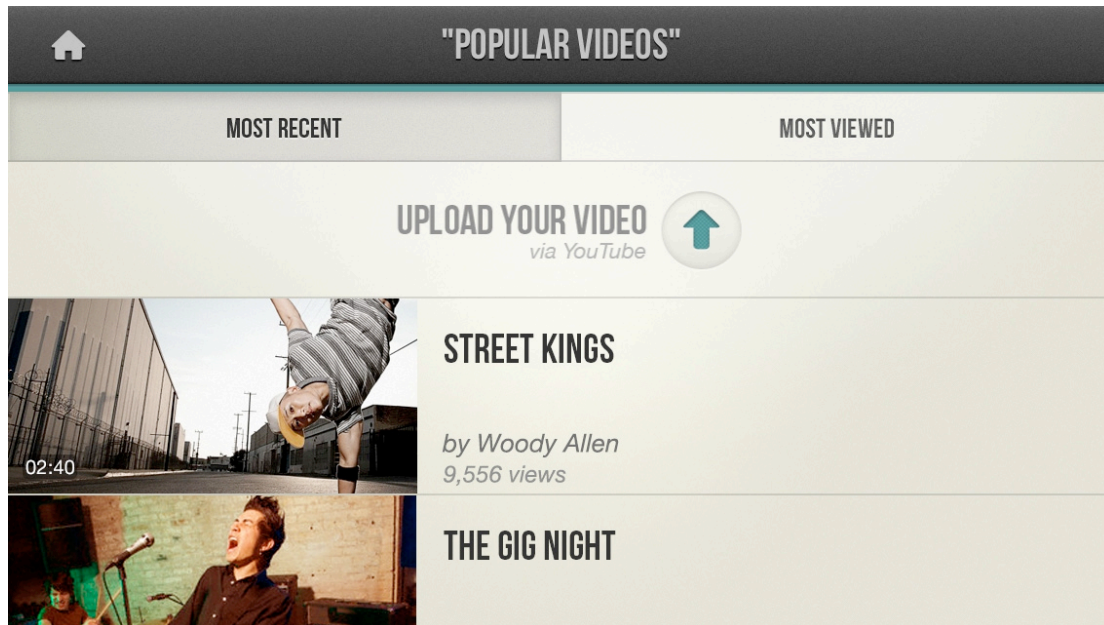

5. Once done, render the video by simply tapping on **“Tick”** icon.

Your video will be rendered within seconds and saved as a new video in Media Library.

“Popular Videos” Community:

“Popular Videos” is a community that we’ve provided for all our Game Your Video users. Enhance your video-making skill and showcase them to all our Game Your Video users.

Note: All video uploads are done through YouTube.

Most Recent: Lists videos in descending order of date uploaded i.e. latest uploaded video will appear first in list.

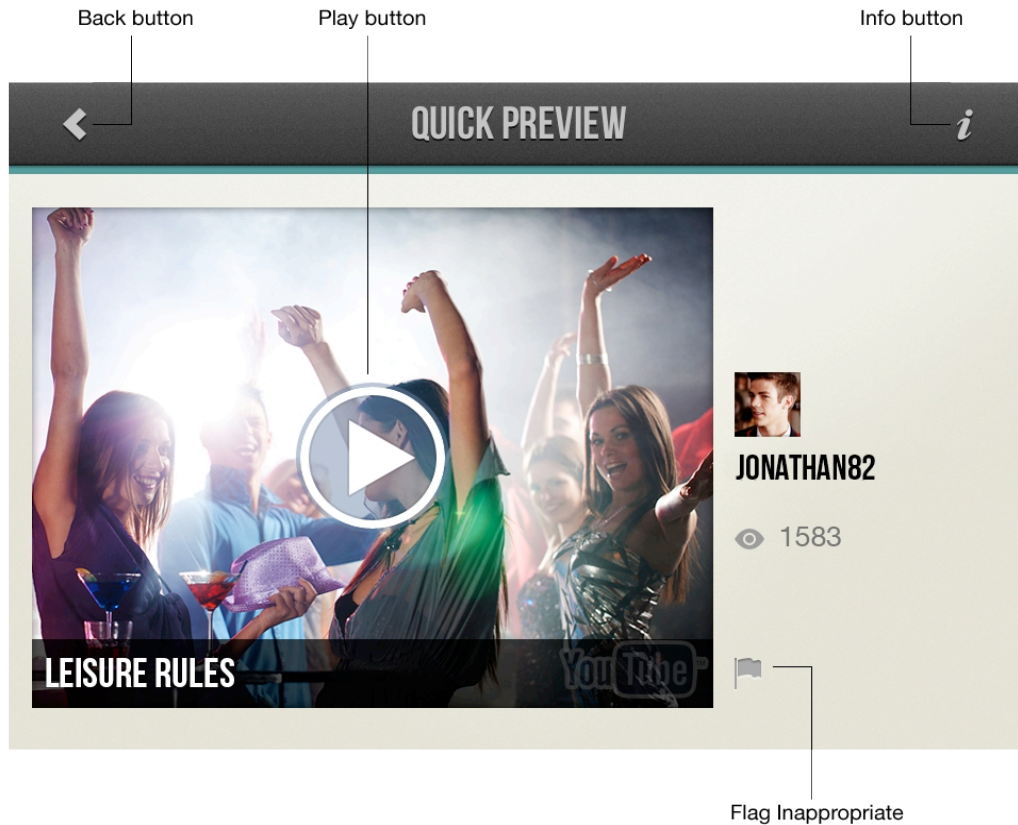

Most Viewed: Lists videos in descending order of view counts.

Video bar: Consists of the following:

1. **Video thumbnail:** An initial thumbnail along with video duration is provided.
2. **Title:** Shows the title for the uploaded video.
3. **Username:** YouTube username is shown for the uploaded video.
4. **View count:** Shows the number of views for the uploaded video.

Quick Preview:

Quick Preview window provides you with an enlarged thumbnail view of the video along with a Play button to play the video. You can also view uploaded user's profile picture for YouTube account along with view counts for the video.

Back button: Tapping on it takes you back to the previous screen.

Info button: Opens up an Info screen for the uploaded video showing description, upload date and effects applied on the video.

Play button: Plays the video using default YouTube player.

Flag button: Enables users to flag current video as **inappropriate** for public viewing.

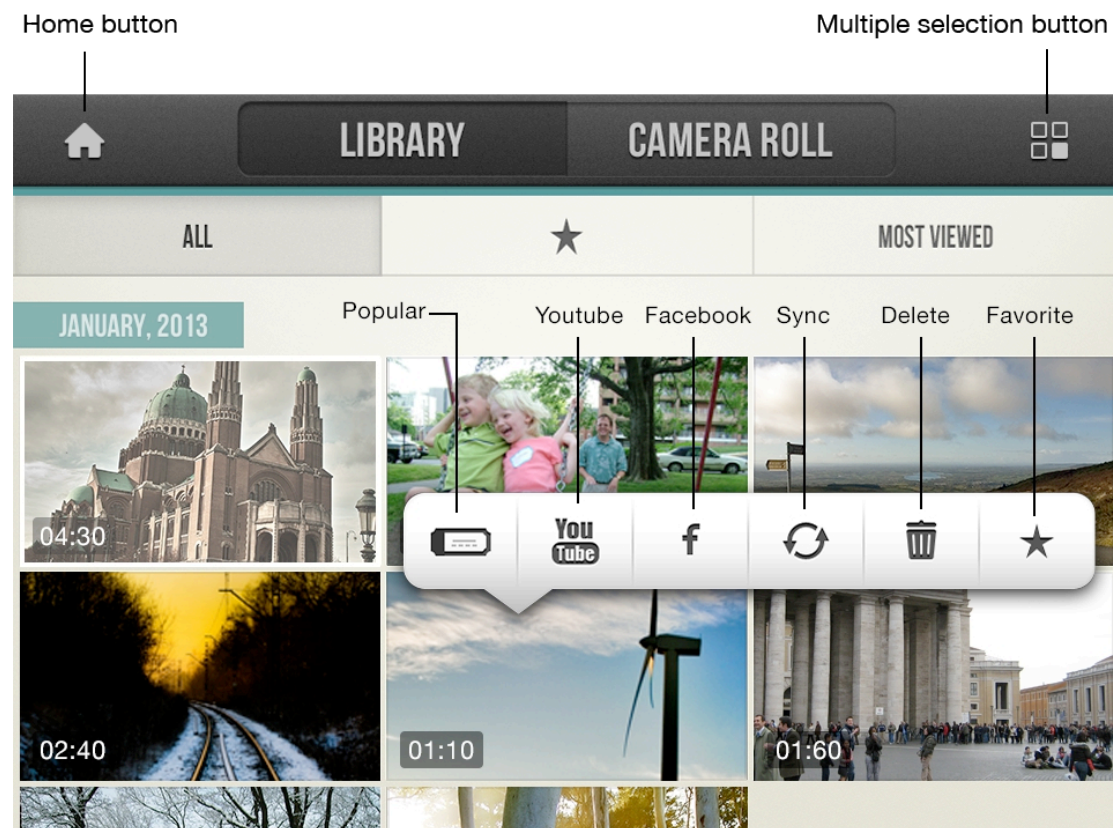

Media Library:

Media Library is a personalized video library used to store and organize your captured and gamed videos. It encapsulates videos in 3 tabs:

1. All videos
2. Favorite videos
3. Most Viewed videos

Hence, all your videos are organized according to your needs.

By default, all your captured and gamed videos are stored in Media Library. You can also view an entire list of Camera Roll videos.

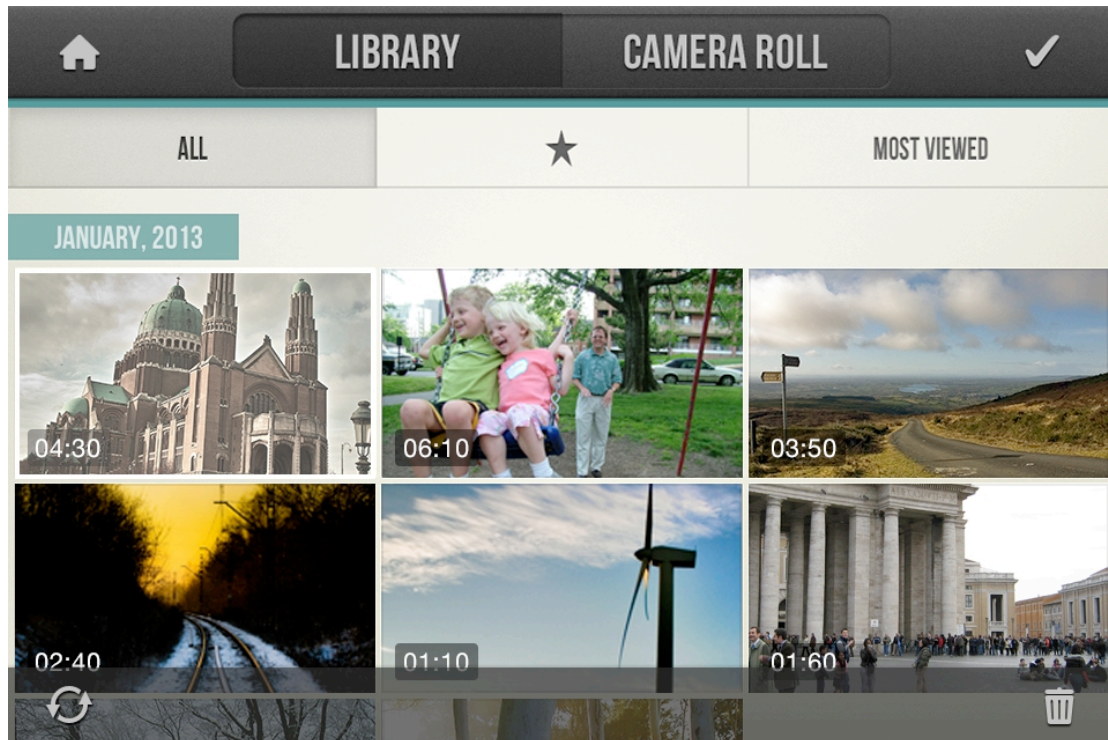

Long-tap Options:

1. **“Popular” button:** Enables you to share your videos with the community of GYV users via YouTube login.
2. **YouTube button:** Allows sharing selected video on YouTube.
3. **Facebook button:** Allows sharing selected video on Facebook.
4. **Sync button:** Allow you to sync current video to Camera Roll library.
5. **Delete button:** Allows deletion of selected video.
6. **Favorite button:** Enables selected video to be favorite.

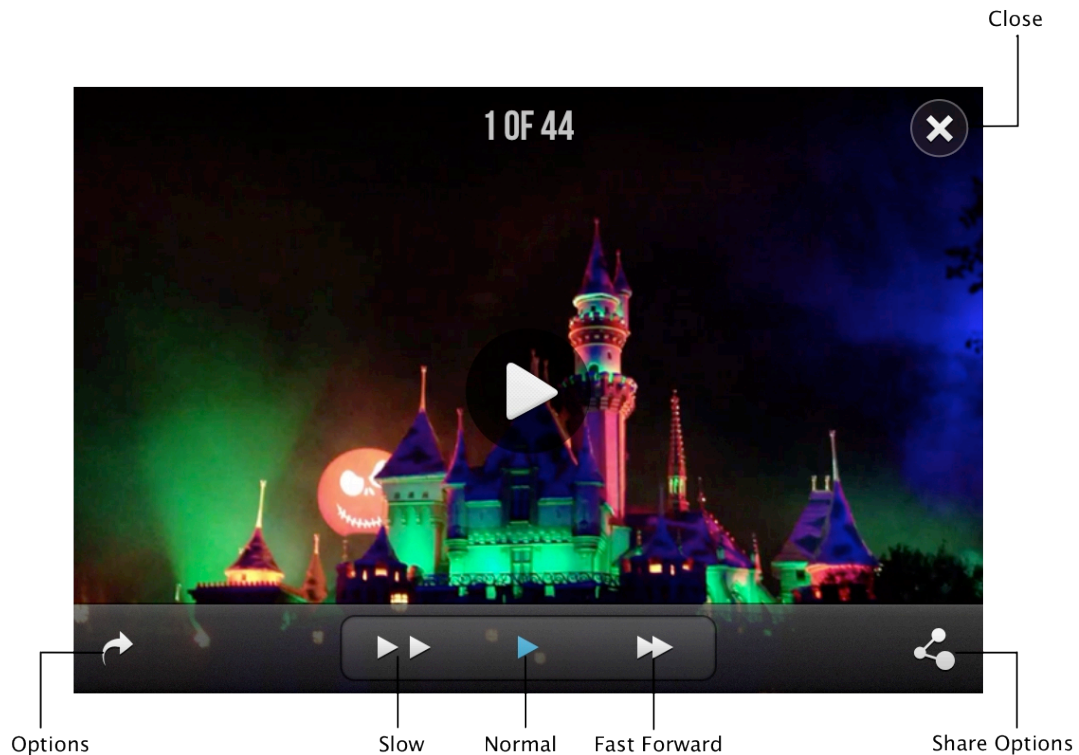

Multiple-selection button: Enables multiple videos to be selected to Sync or Delete.

The multiple-selection window is as follows:

Media Player:

Game Your Video provides you with a customized Media Player to play and enjoy your gamed or recorded videos.

Share Options: Opens up a list of video sharing options.

Play button: Plays the video with selected playback speed.

Options button¹: Brings up a list of actions that can be performed for the current video. The actions include:

1. **Sync to Camera Roll:** Copies the video to Camera Roll library.
2. **Trim button:** Opens up the default **Trim** window.
3. **Info button:** Opens up an Info screen for the particular video.
4. **Delete button:** Deletes the video from Media Library.

Playback Controls:

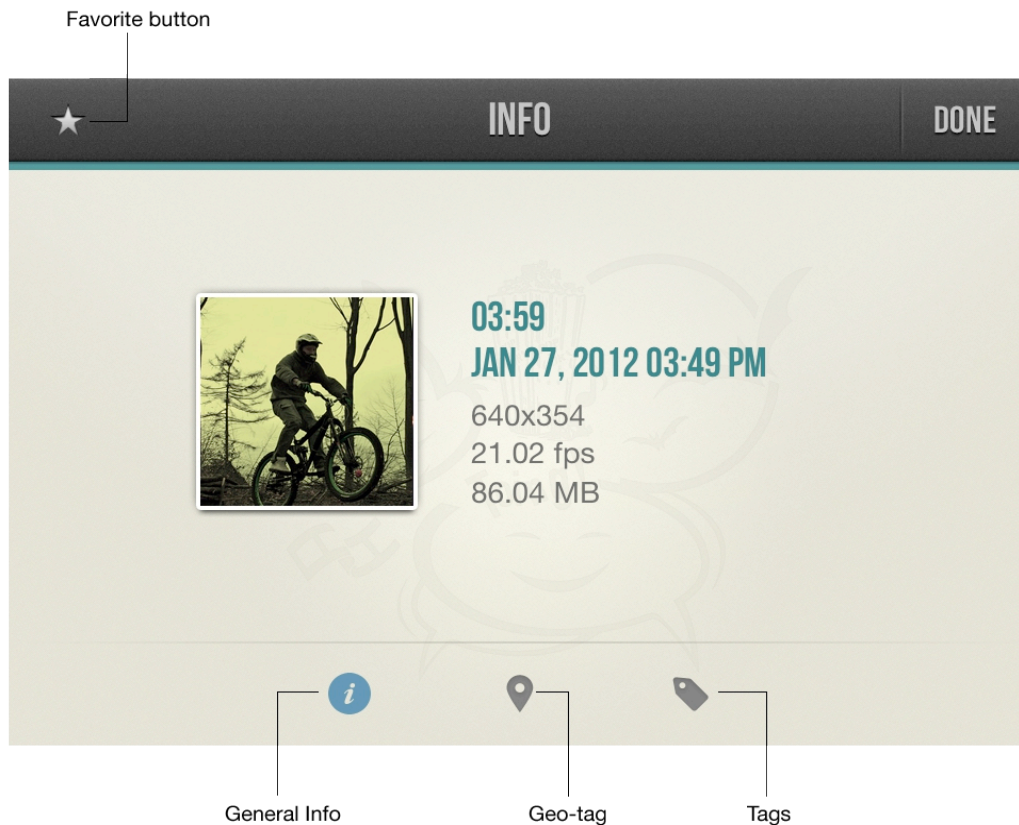

1. **Slow button:** Plays the video in twice the duration time.
2. **Normal button:** Plays the video at normal speed.
3. **Fast Forward button:** Plays the video in half the duration time.

¹ Option button actions are not available for Camera Roll videos.

Info Page:

Info page provides you with a detailed analysis of the selected video. Tapping on the “i” icon in Media Player opens up the Info screen.

You can view general information, Geo-tags and effects applied for the current video by tapping on the different icons available.

Favorite button: Adds the current video in Favorite tab of Media Library.

General Info button: Shows the date-time, duration, FPS and size of the current video along with a video thumbnail.

Geo-tag: button: Displays the location of captured video.

Tags button: Opens up the Tags screen to display all the effects applied to the video.

Done button: Closes the Info screen.

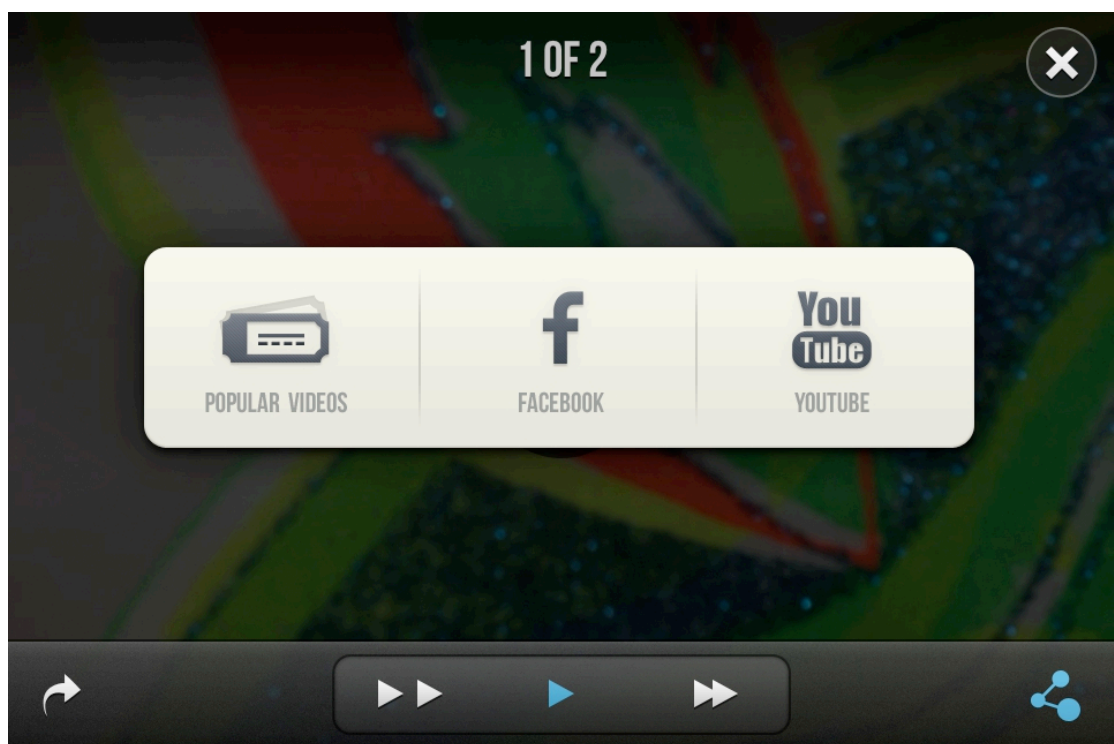

Share screen:

Game Your Video allows you to share your captured and gamed videos to YouTube and Facebook. You can share a video either by long-tapping it in Media Library or opening it in Media Player.

Game Your Video also supports single sign-on for Facebook login i.e. if you are already signed in to Facebook on your device using Facebook app or through Safari, the app will automatically detect it. Hence, there is no need to enter credentials again.

The following are the steps to share a video on YouTube or Facebook:

1. Open a video in Media Player. Tap on “**Share Options**” button and select YouTube or Facebook.

2. The YouTube/Facebook Share screen slides up.

Note: If login process is not complete, then login screen will come up.

3. Enter a Title and Description that will appear with the uploaded video. You can also add **Tags** for the uploaded video. There is also an option to share your YouTube videos onto “**POPULAR VIDEOS**” community, by selecting the checkbox below.

CANCEL YOUTUBE UPLOAD

TITLE
Description

☐ SHOW IN POPULAR VIDEOS

Video shall be uploaded to your YouTube channel

OR

4. Enter a Description that will appear with the uploaded video.

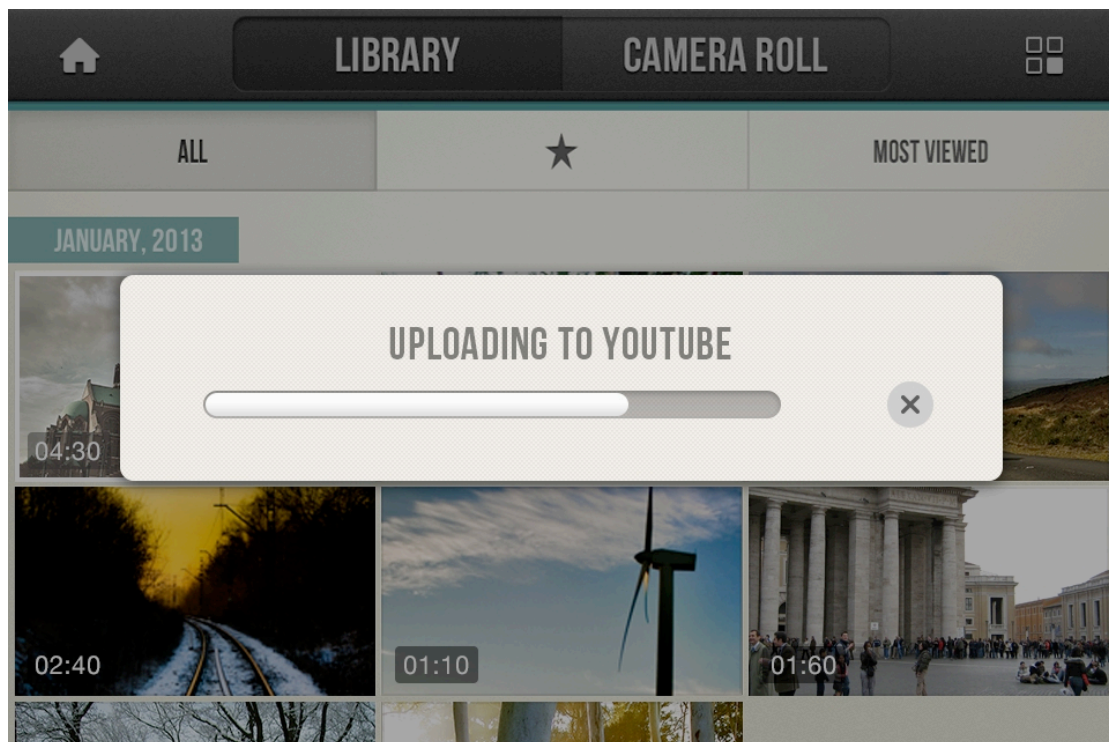

CANCEL FACEBOOK UPLOAD

Check out this video!!!!!!

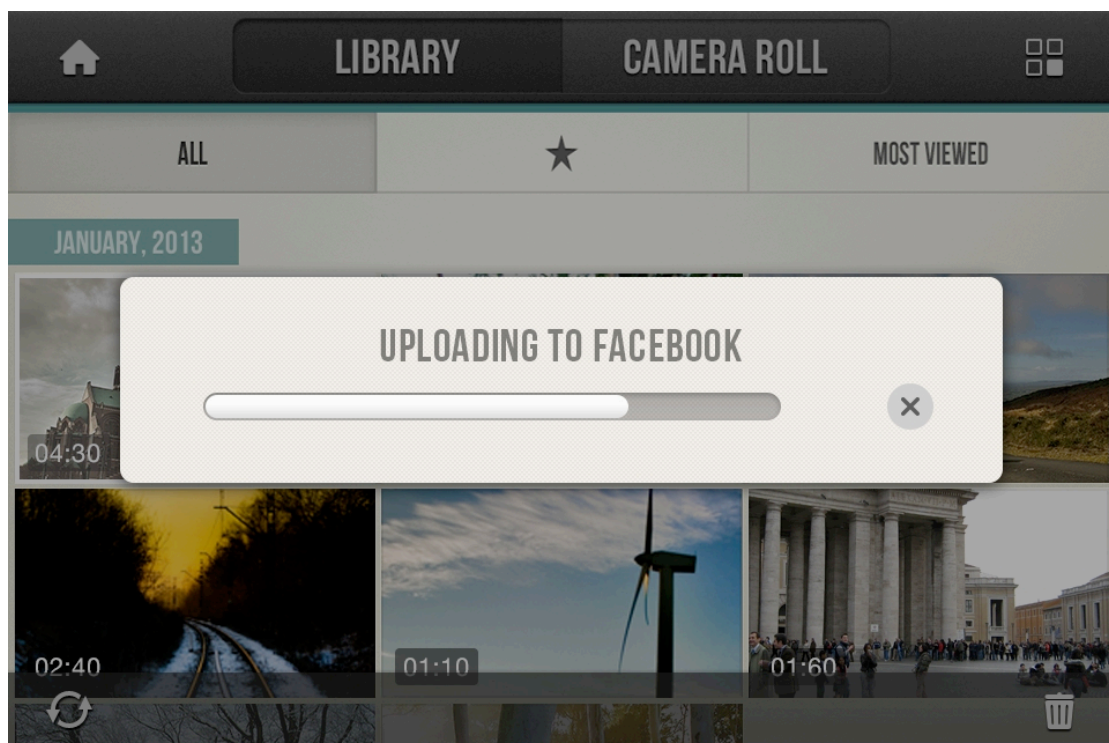

Video shall be uploaded to your Facebook account and posted on your wall

5. When finished, tap on Upload button.

- The Upload progress bar will appear and the video will be uploaded to YouTube/Facebook.

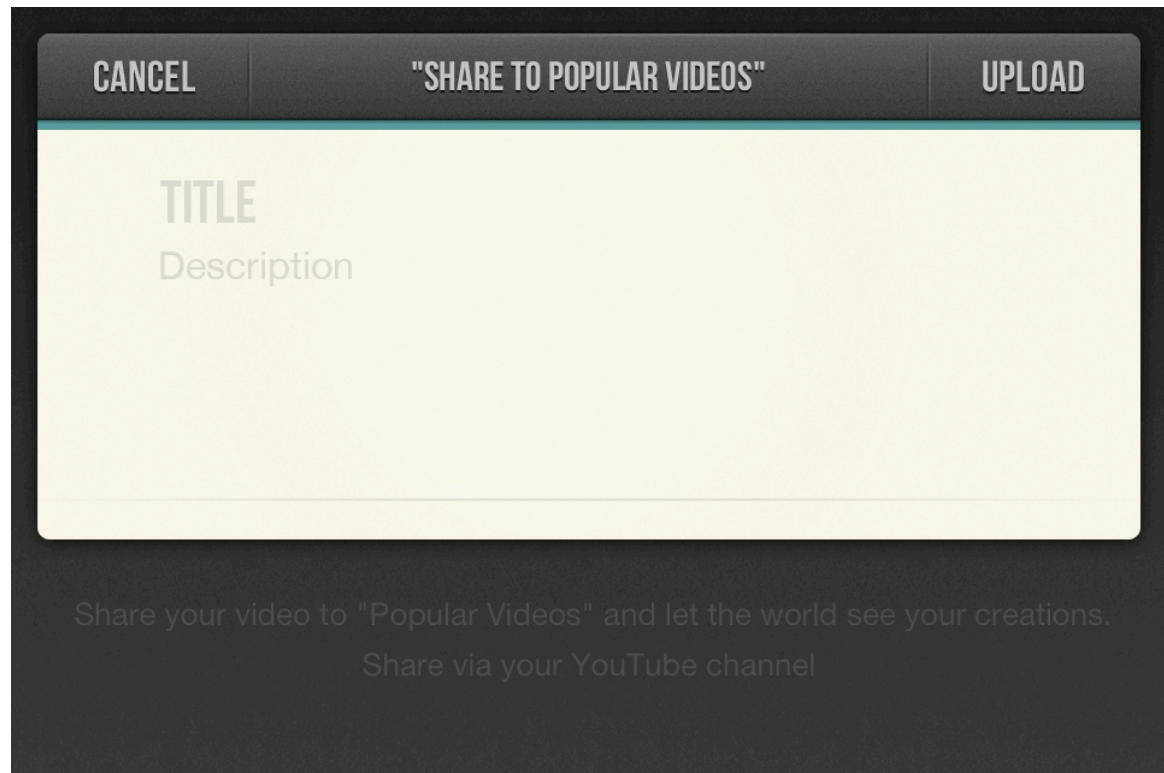

OR

“Popular Videos” Sharing:

You can share your creations onto **“Popular Videos”** community directly by long tapping on the video in Media Library screen and tapping Community button.¹

The following Share screen would open if you have logged in to YouTube.

The image shows a mobile application interface for sharing a video. At the top, there is a dark grey header bar with three buttons: 'CANCEL' on the left, '"SHARE TO POPULAR VIDEOS"' in the center, and 'UPLOAD' on the right. Below the header is a large, light yellow rectangular area for text input. Inside this area, the word 'TITLE' is displayed in a large, bold, grey font, and the word 'Description' is displayed below it in a smaller, grey font. At the bottom of the screen, there is a dark grey footer area containing two lines of text in a light grey font: 'Share your video to "Popular Videos" and let the world see your creations.' and 'Share via your YouTube channel'.

Enter a Title and Description that will appear along with the uploaded video.

Note: Sharing on “Popular Videos” community will automatically share your video to YouTube and can be publicly viewed.

¹ Check Media Library long-tap options page for “Community” button.

Settings Page:

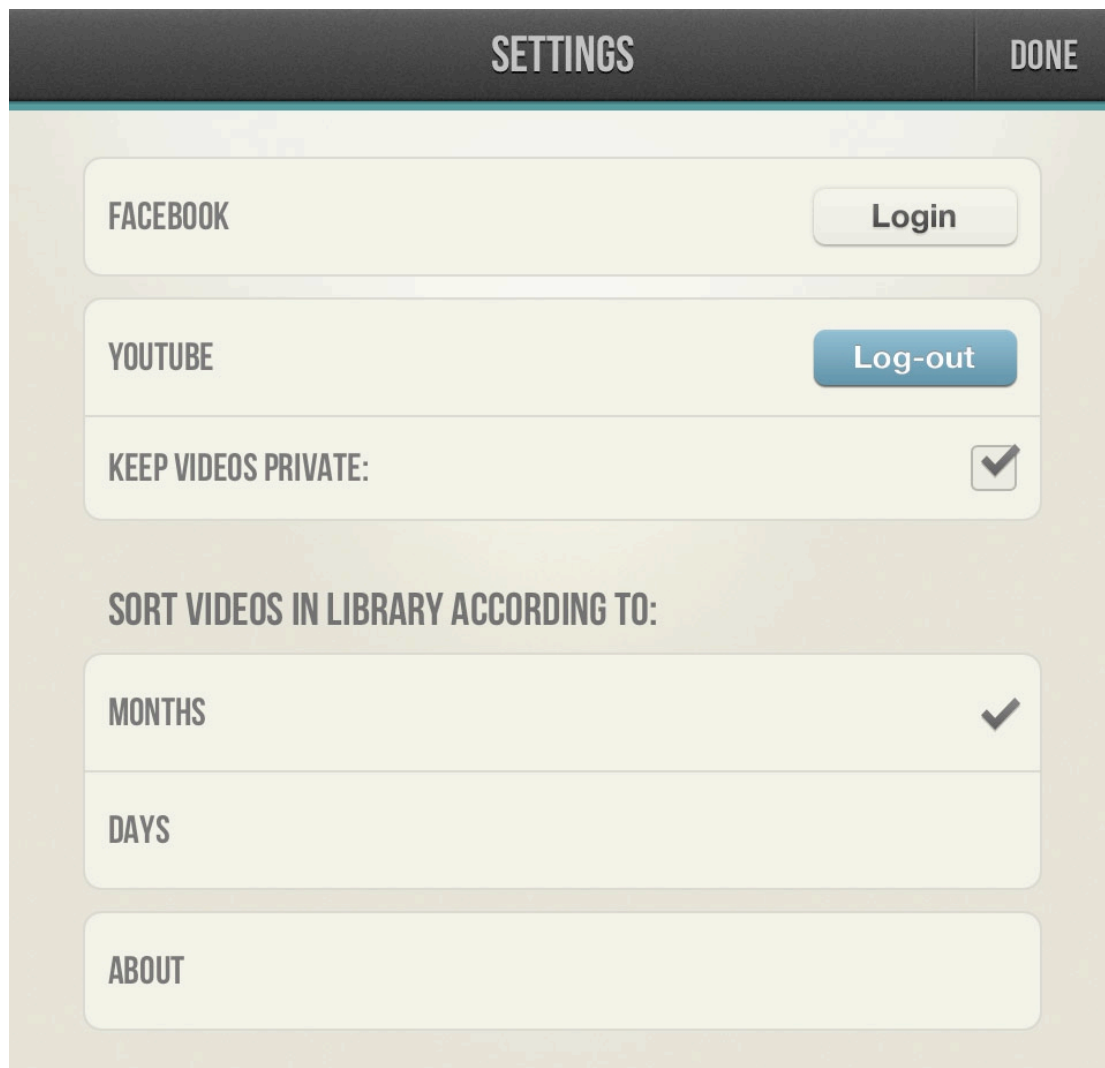

Settings page provides you with Login options for sharing on YouTube or Facebook.

Tapping on the Login button opens the default login page for the site. Once you have logged in to Facebook or YouTube, the corresponding Login button changes to Log-out.

Game Your Video supports Facebook single sign-on feature. Hence, if you are logged in through Facebook app on your device, simply tap on **Login** button in Settings and you will automatically be logged in.

You can also change the Library appearance settings by selecting either Days view or Months view.

Finally, for information like app version, app usability description or email for support assistance, you can check out **About** page.

Frequently Asked Questions (FAQs):

Store page:

❓ How do I make an in-app purchase?

In-app purchases can be directly made through the Store page.

Here are the steps for assistance:

1. Go to Store page and tap on “**Buy**” button for the flavor you want to purchase.
2. A confirmation dialog to submit your request will come up.
3. Tapping on “Buy” will automatically process your purchases and unlock the flavor.

Note: All in-app purchases are done from your iTunes account.

❓ How do I restore my purchases?

If you want to restore your already bought items, simply follow the steps below:

1. Go to Store page and swipe up to the last page.
2. Here, tap on **Restore purchases** button.
If you are logged in to App Store, all your bought items will automatically be unlocked else a dialog box to enter your Apple ID will come up. Login and your purchases will be restored.

Compatibility and Ease of Use:

❓ On which device can I use Game Your Video?

Game Your Video supports the latest 4-inch display devices including iPhone 5 and iPod Touch 5G. Other compatible devices include iPhone 4 and 4S along with iPod Touch 4G.

❓ Which iOS does Game Your Video support?

Game Your Video runs efficiently on iOS 5.0 and later. If your iPhone runs on iOS 4.x.x or below, please update to the latest iOS before using the app.

❓ Can I download Game Your Video for iPad or iPad 2?

You cannot download this app on iPad since it does not have an in-built camera. However, the app does run on an iPad 2 and later but with smaller screen. We would advise you to use this app on iPhone and iPod touch platforms only.

❓ How do I know the current version of Game Your Video on my iPhone/iPod?

You will find all information about the app including contact points, version and new update features in the **About** page. Simply tap on **Settings** button > **About** in Main Screen to open the **About Us** panel.

Video Recording:

Q At what resolution can I record videos?

On an iPhone 5:

You can choose to record videos in HD mode, with optimal resolution 1920x1080 pixels from the Rear camera, and 1280X720 pixels using the Front camera.

FPS: ~30 as we are using the iPhone 5 or 4S default video recording.

OR

You can record videos in **High-res** mode from the custom camera, and videos of optimal resolution 640x480 pixels from the Rear and Front cameras.

FPS: ~23

OR

You can record videos in **Mid-res** mode from the custom camera, and videos of optimal resolution 480x360 pixels from the Rear and Front cameras.

FPS: ~23

On an iPhone 4S:

You can choose to record videos in HD mode, with optimal resolution 1920x1080 pixels from the Rear camera, and 640x480 pixels using the Front camera.

FPS: ~30 as we are using the iPhone 4S default video recording.

OR

You can record videos in **High-res** mode from the custom camera, and videos of optimal resolution 640x480 pixels from the Rear and Front cameras.

FPS: ~23

OR

You can record videos in **Mid-res** mode from the custom camera, and videos of optimal resolution 480x360 pixels from the Rear and Front cameras.

FPS: ~23

On an iPhone 4:

You can choose to record videos in HD mode, with optimal resolution 1280x720 pixels from the Rear camera, and 640x480 pixels using the Front camera.

FPS: ~30 as we are using the iPhone 4 default video recording.

OR

You can record videos in **High-res** mode from the custom camera, and videos of optimal resolution 640x480 pixels from the Rear and Front cameras.

FPS: ~23

OR

You can record videos in **Mid-res** mode from the custom camera, and videos of optimal resolution 480x360 pixels from the Rear and Front cameras.

FPS: ~23

On an iPod touch 5G:

You can choose to record videos in HD mode, with optimal resolution 1920x1080 pixels from the Rear camera, and 1280X720 pixels using the Front camera.

FPS: ~30 as we are using iPod touch 5G default video recording.

OR

You can record videos in **High-res** mode from the custom camera, and videos of optimal resolution 640x480 pixels from the Rear and Front cameras.

FPS: ~23

OR

You can record videos in **Mid-res** mode from the custom camera, and videos of optimal resolution 480x360 pixels from the Rear and Front cameras.

FPS: ~23

On an iPod touch 4G:

You can choose to record videos in HD mode, with optimal resolution 1280x720 pixels from the Rear camera, and 640x480 using the Front camera.

FPS: ~30 as we are using the iPod touch with camera default video recording.

OR

You can record videos in **High-res** mode from the custom camera, videos of optimal resolution 640x480 pixels from the Rear and Front cameras.

FPS: ~23

OR

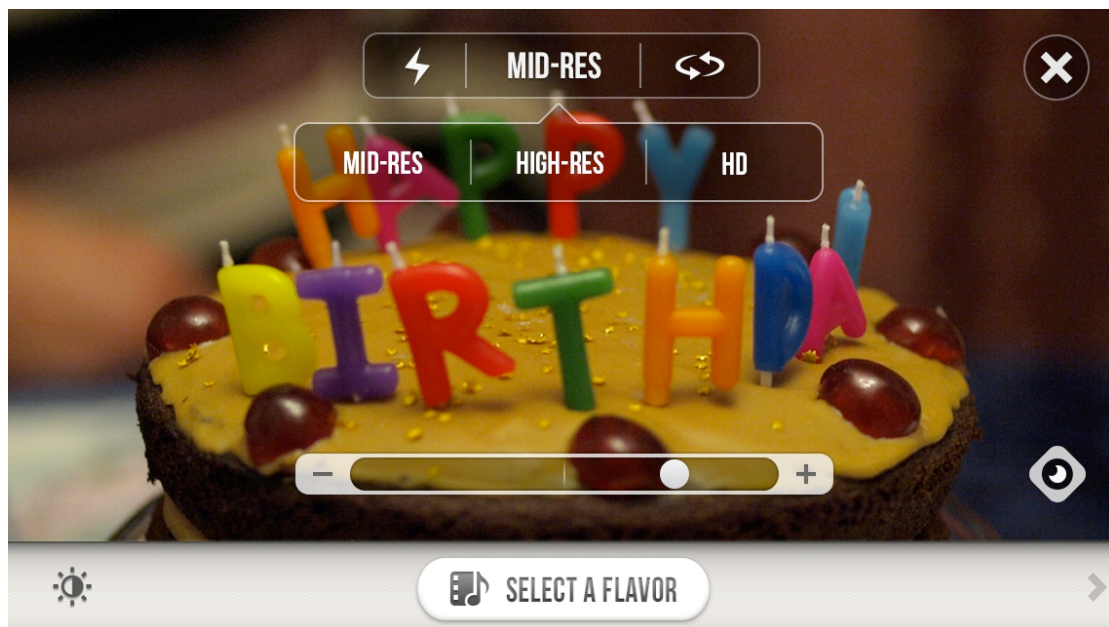

You can record videos in **Mid-res** mode from the custom camera, and videos of optimal resolution 480x360 pixels from the Rear and Front cameras.

FPS: ~23

Q How can I change the resolution for video recording?

In order to change the video recording resolution, follow the steps below:

5. Initially, tap once on the screen to bring up the onscreen controls.
6. Now tap on the Resolution mode (**High-res**, by default) and choose from the drop-down options. (See screenshot)

7. Tap to select a particular recording mode. The recording mode will change and you can capture videos with the selected resolution.

Q Can I pause while recording videos?

Once you start recording, you do have an option to Pause and then resume recording. This option is however missing in HD mode for recording videos on iPod touch 4G and 5G, iPhone 4, 4S and 5 since HD mode uses the default camera implementation.

Q Can I zoom while recording a video?

Yes, you can zoom in real time while recording your videos on your iPod touch 4G and 5G, iPhone 4, 4S, 5 in Mid or High recording mode. However, you cannot zoom if you choose HD mode i.e. Default camera.

Q Can I apply Flavors, Video filters or Audio filters for video recording?

Yes, you can apply Flavors, Video filters, Audio filters or iPod music and start recording a video. Video filters will apply to the live preview. Recorded video will show the effects applied. However, if you want to apply more than one flavor, video filter, audio filter or iPod music while recording is in progress, you will have to Pause video recording.

Q Why is Flavor button disabled?

When recording is in progress, Flavor button is disabled. If you want to apply any flavor or filter, pause video recording. Now select any flavor and start recording again.

Q Can I apply instant effects during video recording?

Yes. You can apply any instant effect you want during video recording. The visual instant effects (e.g. Echo, Jitter, etc.) can be seen live in video recording preview screen.

Q I want to apply Brightness, Contrast and Saturation while recording but it appears to be disabled.

Brightness, Contrast and Saturation are disabled when you have already applied video filters for recording. Hence, to use these Adjust controls you will have to remove video filters.

Q How do I apply Flash for my videos on iPhone 4, 4S, 5 and iPod touch 5G?

Game Your Video provides you with an on-screen flash button to switch ON, for recording in low-light conditions. Just tap on the preview screen once to bring the on-screen controls and then tap on Flash icon.

Q How do I adjust the exposure for my videos?

Exposure can be adjusted by sliding one finger across the Preview area. When desired exposure is found, simply remove your finger and the Exposure control will disappear.

Q How do I know if I have selected a flavor or audio filter?

Selecting a particular flavor will apply its own video filter or audio filter and hence will definitely make a difference. There will also be a change in mapping of instant actions for a particular flavor.

Secondly, if an audio filter or iPod music is selected then a small audio icon will appear on the preview screen.

Q Can I switch to front camera while recording?

No. You cannot switch cameras while recording is ON.

Q In what format are the recorded videos saved?

In Game Your Video, all captured videos are saved in **.mov** format.

Q What is Media Library?

Media Library is your own personalized library that allows you to manage your videos efficiently. You can categorize your favorite and most-viewed videos. Through Media Library, you can also share, edit or delete your captured videos.

Q How can I delete my videos in Media Library?

By default, all captured videos are stored in Media Library. Hence, to delete any video, follow these steps:

1. Tap on the Library button to open Media Library.
2. Now, long-tap on a video and tap on Trash icon to delete it.

OR

2. Open the video in Media Player. Now, tap on **Options>Delete** button to delete the current video.

OR

2. Tap on Multiple-selection button and select multiple videos. Now, tap on Delete button present in the bottom bar.

Q How can I sync videos from Media Library?

By default, all captured videos are stored in Media Library. Hence, to sync any video, follow these steps:

1. Tap on the Library button to open Media Library.
2. Now, long-tap on a video and tap on Sync icon to sync it.

OR

2. Open the video in Media Player. Now, tap on **Options>Sync** button to sync the current video to Camera Roll.

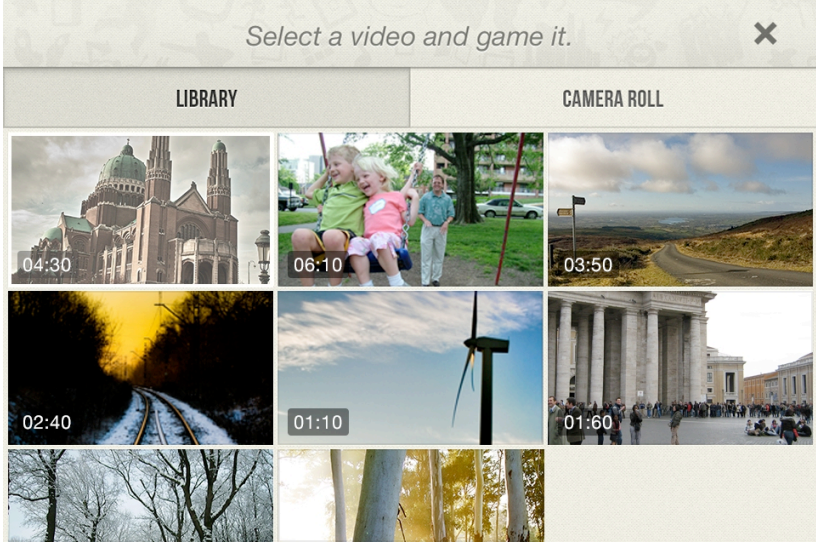

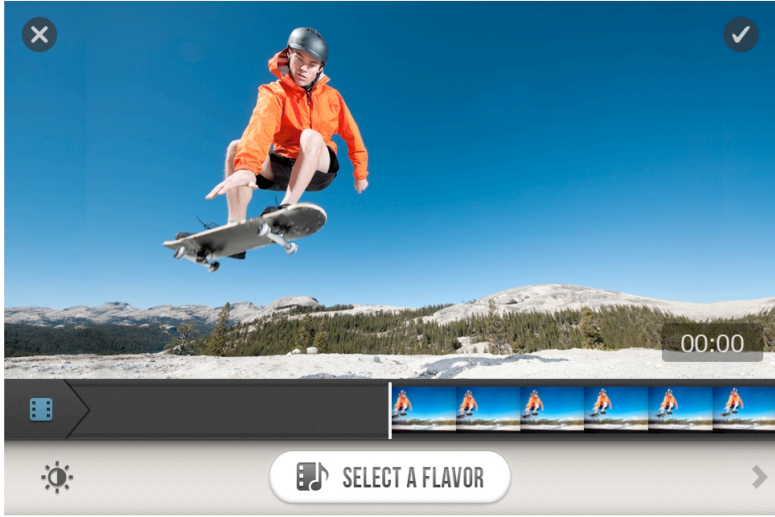

OR

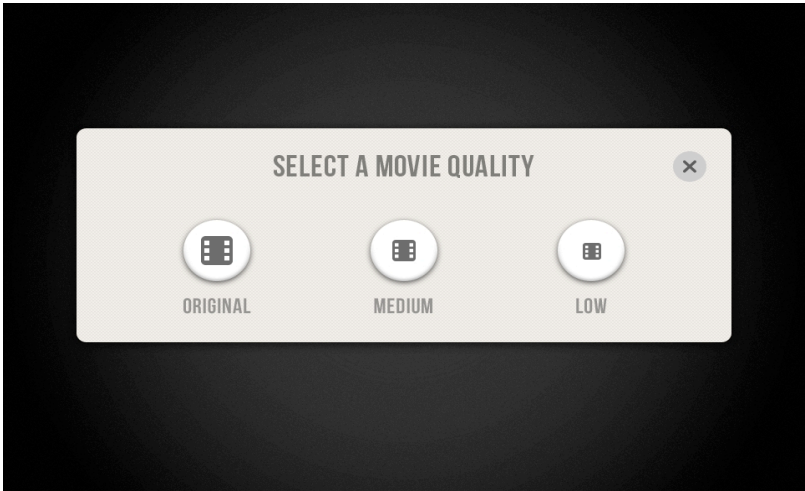

2. Tap on Multiple-selection button and select multiple videos. Now, tap on Sync button present in the bottom bar.

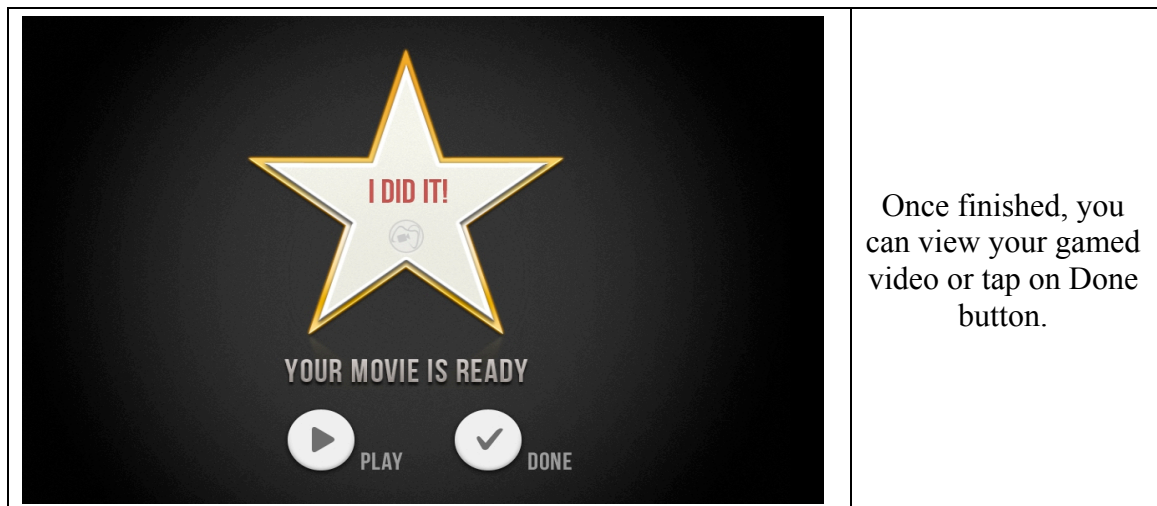

Post-Editing Screen:

Q How do I edit a video?

Editing a video is relatively simple. Here is a basic illustration:

	<p>Tap on Game Your Video screen to open Media Picker. Select any video to edit by tapping on it.</p>
	<p>The selected video opens up in Edit screen. Here tap on Play button to start playing the video.</p>

	<p>Now select an instant effect and watch it being applied directly to the playing video.</p> <p>Also, observe the Timeline that colors the thumbnail being passed. Tap on the same instant effect again. The Timeline will not color the upcoming frames.</p>
	<p>Now tap on Done button in the right corner. A resolution selection window appears. Select Original resolution mode.</p>
	<p>Rendering process will start as shown.</p>

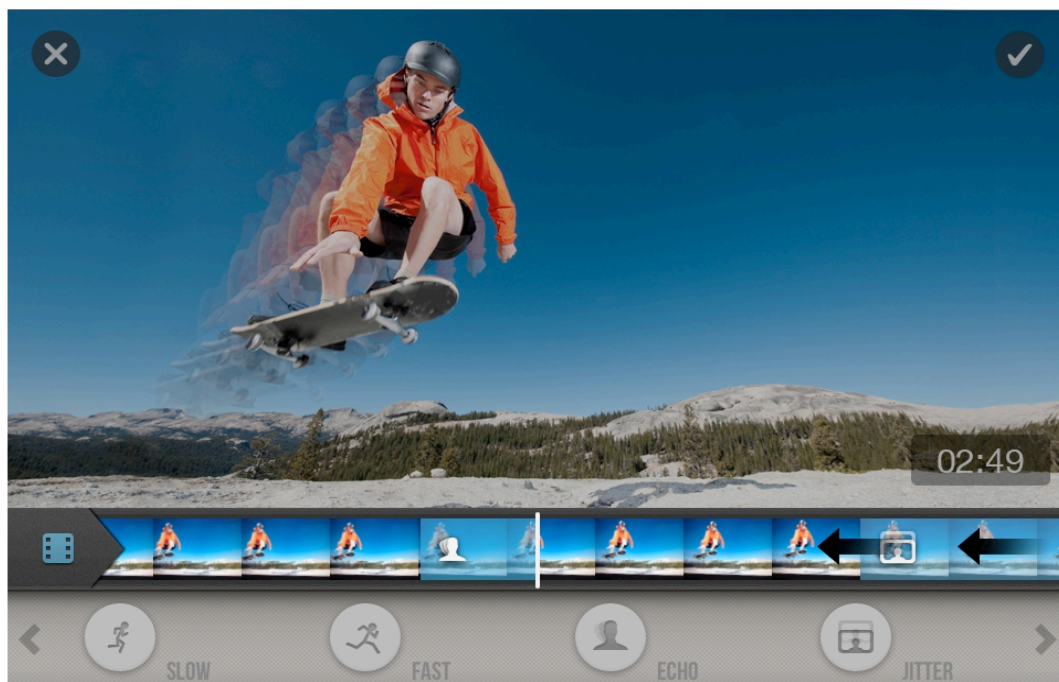

Thus, you can apply required instant effects, flavors, video filters, audio filters, and iPod music onto your video and make it a masterpiece.

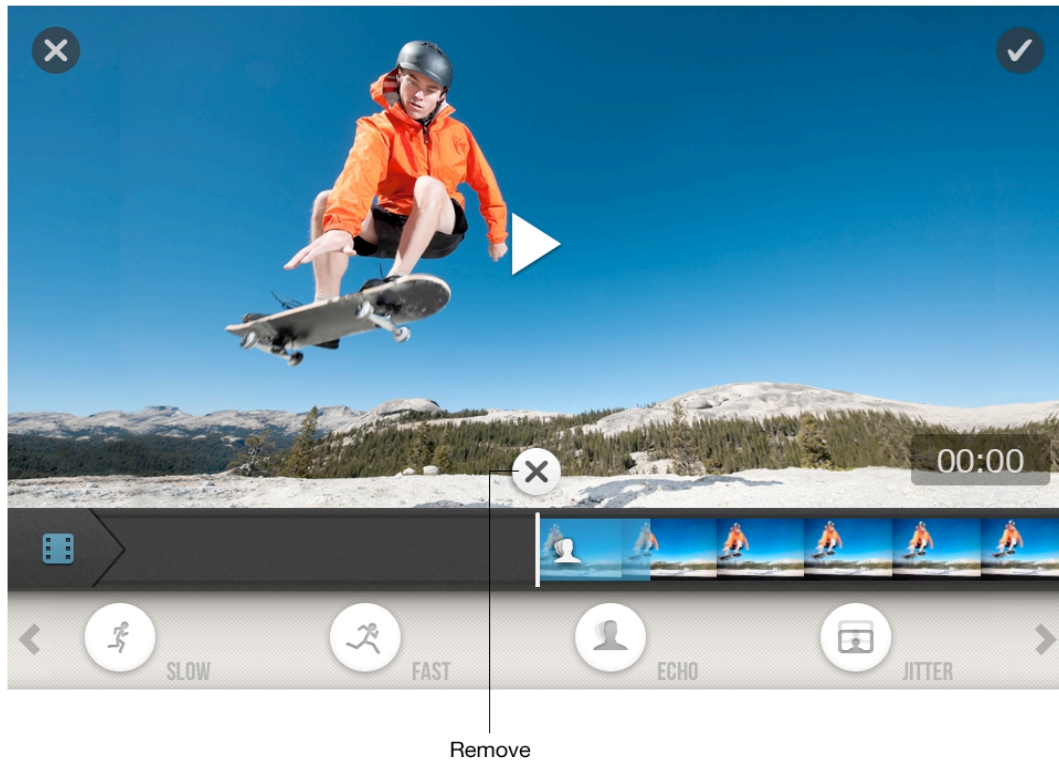

Q How do I remove an already applied effect from Timeline?

Removing an applied effect is relatively easy. Here are the steps:

1. In Edit screen, swipe the Timeline back to find the exact applied effect to be deleted.

2. Double-tap on the effect overlay so that it snaps with the Play-head. A Remove button will come up on top of the Play-head.

3. Tap on the Remove button to remove the applied effect. The effect will be removed.

Q Can I apply more than one flavor while editing a video?

No. If you apply more than one flavor while editing a video, the last selected flavor will be set for the entire video and other flavors will be replaced.

Q How do I apply background track for my video?

1. Firstly, select the video to edit from Media Picker.
2. In Edit screen, tap on Flavors button in the bottom bar.
3. From Flavor grid, tap on audio filters.
4. The Audio Filters page opens. Here, go to the 1st page and tap on iPod music button.
5. A default Songs library opens. Tap on the song to apply it.
6. When finished, tap on Done button in Flavor grid.
7. Further, tap on Done button in Edit screen to render the video.

Your video will be ready with the selected background music.

Q Can I keep the app in background while it is rendering?

No. Rendering process does not work in background. Hence, if you are rendering any video, please wait until the process is complete.

Q Can I use Camera Roll videos to edit?

Yes. You can pick any video from Camera Roll library and game it. All gamed videos will be saved in Media Library.

Q I have a video which I want to edit, but don't want to lose it.

Don't worry folks!!! All gamed and edited videos are saved as a new copy in Media Library. You can later sync them to Camera Roll library. Hence, the original videos remain intact.

Q What are the formats of videos I can use to edit?

You can use videos of any format that iPhone/iPod supports and still have the ability to game it. Hence, all videos having .mov, .mp4, .m4v formats are editable. However, the gamed video will exhibit .mov format.

Q What is the resolution of my gamed video?

You can save your gamed video in the resolution of your choice:

1. **Original:** Available for iPhone 4, 4S, 5 and iPod Touch 5G. This resolution saves the video in same resolution as original.
2. **Medium:** Saves the video in lower resolution than Original.
3. **Low:** Saves the video with least resolution. Hence, rendered video is of less data size.

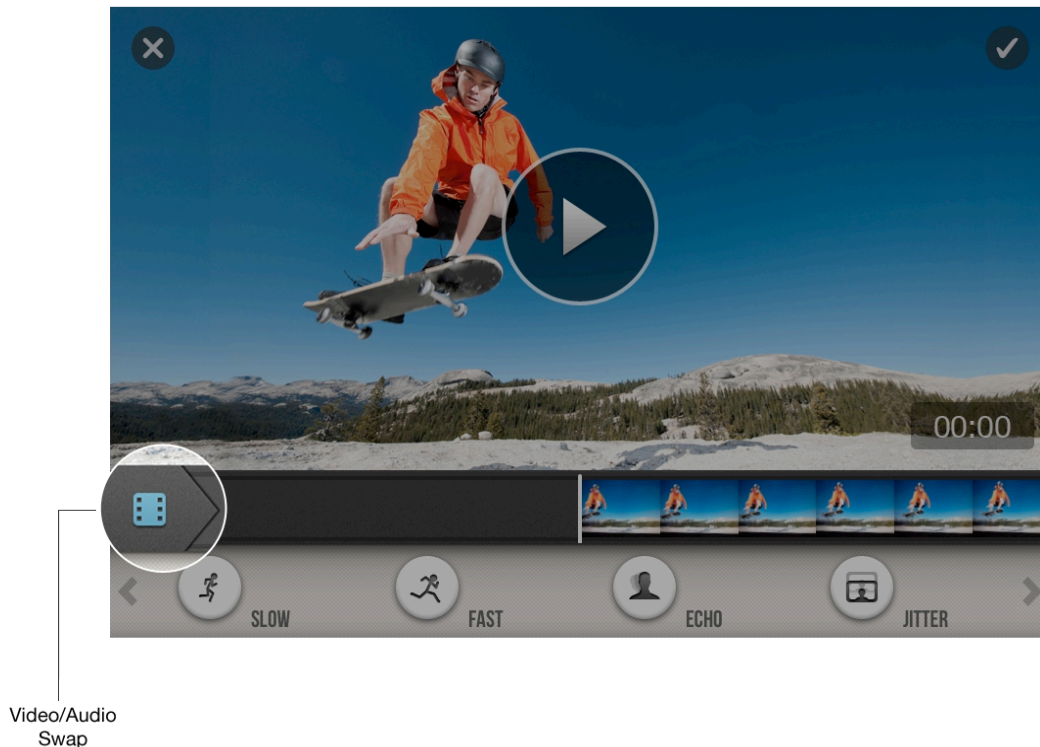

iPod Touch 4G supports Medium and Low resolution modes only.

Q I have applied Chipmunk effect after applying Echo, but my Timeline does not show Echo effect applied.

All audio effects are segregated from video effects in Timeline view.

Once an audio effect is applied, the Timeline switches to Audio view. Similarly, if a video effect is applied, the Timeline swaps to Video view.

You can change this view by tapping on the Video/Audio Swap button present beside the Timeline.

Hence, all effects applied to the video will be present but will not be shown completely in the Timeline.

Q Can I overlap an audio effect like Claps with a video effect like Echo for the same frame?

Yes. Video and audio effects can be overlapped in the same frame but the Timeline will depict it separately.

However, 2 video effects or 2 audio effects present in bottom bar cannot be overlapped for the same frame.

E.g. If you have applied Echo effect, then you can't apply Jitter effect over the same frame.

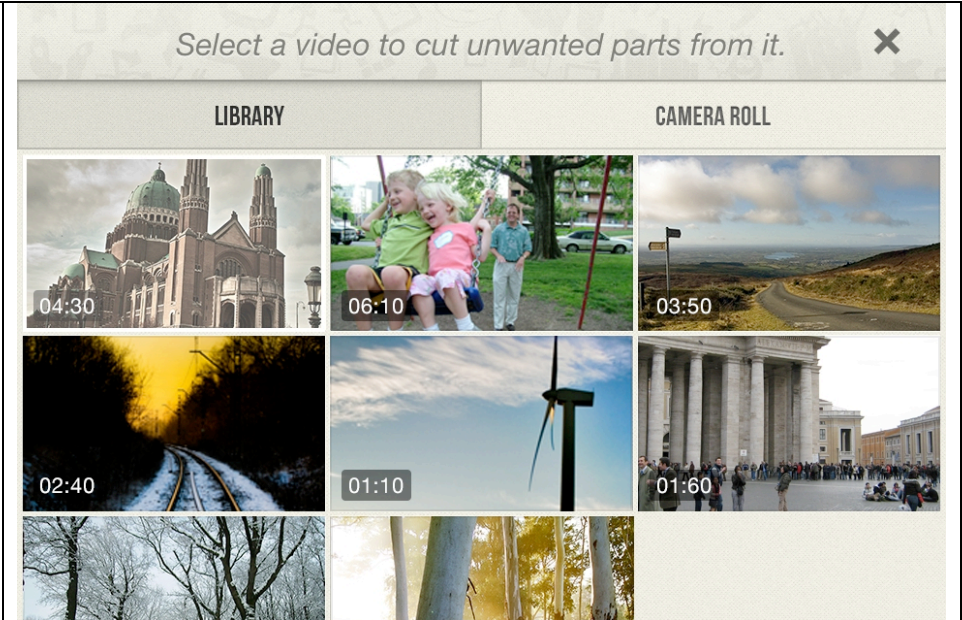

This can only be achieved by gaming a video twice. i.e. Edit and Render the video initially using Echo video effect. Next, select the rendered video to edit again, now using Jitter effect over the required frame.

Cut and Join:

Q How do I cut a portion of the video?

Sometimes your videos may have a few parts, which you may wish to remove. The Cut option lets you remove these unwanted portions of the video.

The steps to cut a video are as follows:

<p>Select a video from the Media Picker library.</p>	
<p>Now tap on Cut button in Edit screen to remove the unwanted portion while the video keeps playing.</p>	

When finished, tap on Render button to initiate the process of removing the unwanted parts and create a fresh video.

Q I accidentally applied a cut effect on a portion of video, which I wanted. Can I undo it?

Yes. Just swipe the Timeline and double-tap on the cut effect overlay that you want to retain. The cut effect portion will snap to the Timeline and a Remove button will appear. Tap on it to retain the part in your trimmed video.

Q What is the resolution of my new enhanced video?

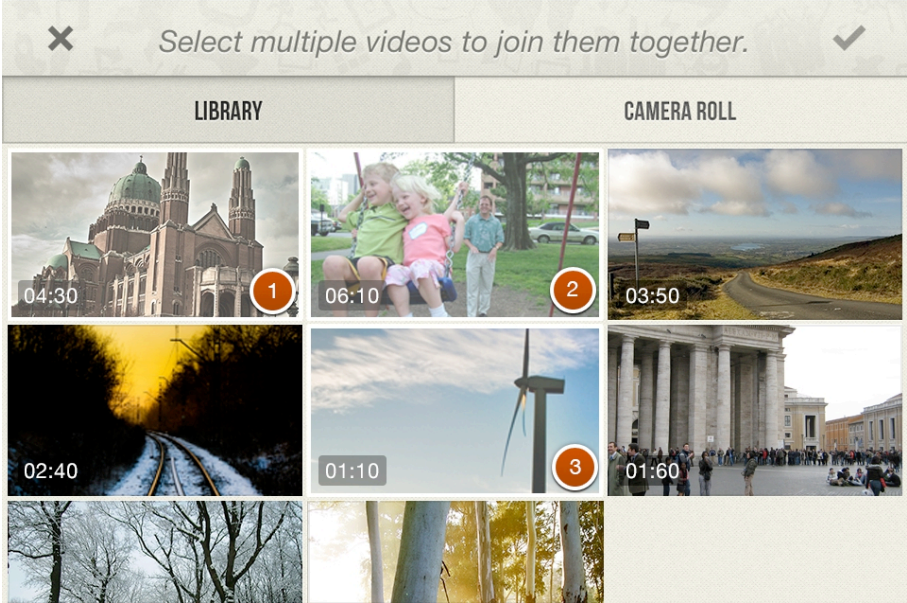

All videos that are cut retain their resolution. Hence, if you cut a video of resolution 640x480 pixels, the rendered video will also have the same resolution.

Q How do I join 2 or more videos?

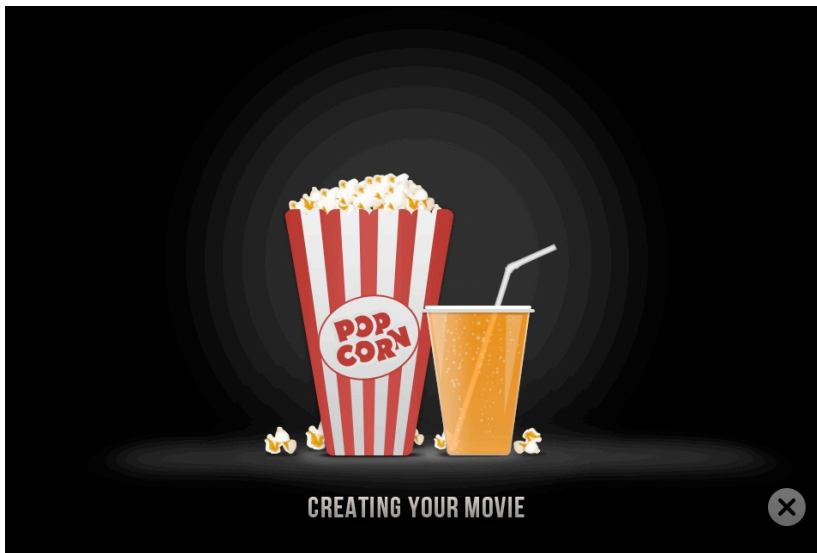

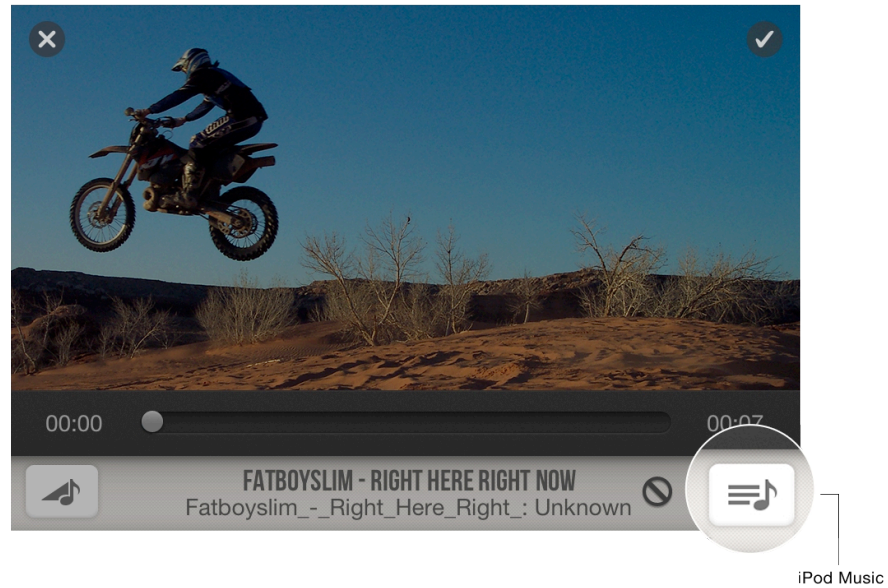

Joining videos in Game Your Video is a straightforward task.

Here are the steps:

Initially, tap on the Join button to open Media Library.

<p>Select 2 or more videos from the Media Picker library in the order you want to join them.</p>	
	<p>Once the joined video opens in Edit screen, tap on the Play button.</p>

You can also add background track for your joined video.

Once finished, tap on Render button to start the rendering process. Enjoy your joined video.

Q What is the resolution of my joined video?

Joined videos will have minimum resolution of 640x480 i.e. 480p for 2 videos with resolution less than 720p.

However, if the resolution for both the joined videos is more than 720p then the rendered video will be of resolution 1280x720 i.e. 720p.

Q How many videos can be joined at a time?

We have set a maximum number of **10 videos** that can be joined at a time. However, you can always join more videos by joining the rendered video again.

Q Can I apply transitions between two intermediate joined videos?

No. Currently the app by itself adds a **Fade-in** transition between two videos. We will be adding new features for this in due course.

Q Can I select portrait videos for joining?

Yes. However, please note if you select a portrait video, it will be cropped to accommodate the landscape view.

Reverse:

Q How do I reverse a video?

Watching a reversed video is a whole lot of fun. However, creating one is also a cakewalk.

Here are the steps:

1. Tap on the large Reverse button to open Media Picker library.
2. Here select a video to reverse. The reversed video will open in Edit screen.
3. Tap on the Play button to view it. You can also apply background track from Songs library to your reversed video.
4. When finished, tap on Render button. The rendered video will be saved in Media Library.

Have fun with friends while watching your reversed video.

Q I am not getting original audio for my reversed video. What's the problem?

Once a video is reversed, original audio will be removed. This is done to remove the inconvenience with the reversed audio.

Split-Screen:

Q I have a video of 10 minutes and other of 5 minutes. Can I use them together?

Yes, both videos would play together until the first video ends at 5 minutes and blackens out, while the second video continues playing till 10 minutes.

Q Can I select more than 2 videos in Split-Screen?

No. At present Split-Screen allows you to add only 2 videos. However, if you want more than 2 videos then simply render it twice and so on.

Q Can I get original audio for the Split-Screen video?

No. Since Split-Screen combines two videos together to play as once, the audio from both videos would result in distortion. Hence, the rendered video will not have any audio.

“Popular Videos” community:

Q I want to upload a video to the community. What is the process?

All uploads to “**Popular Videos**” community work in conjunction with YouTube servers.

Follow these steps for showcasing a video to “Community”:

1. Log in to YouTube with your Email ID and Password through Settings.
2. Disable private sharing for YouTube. All videos uploaded to “Community” are public in nature.
3. Next, open “**Popular Videos**” page through launch screen and tap on Upload button.

Your video will be uploaded and featured under **Most Recent** category.

Q How do I refresh the video list?

Refreshing a page is pretty sleek. Drag the complete page down to refresh it. A Refreshing text will come up and the page will be refreshed.

General:**Q How do I know the total number of videos present in Media Library?**

You can pull down the Media Library page to display the count of all videos present in All or Favorites tab.

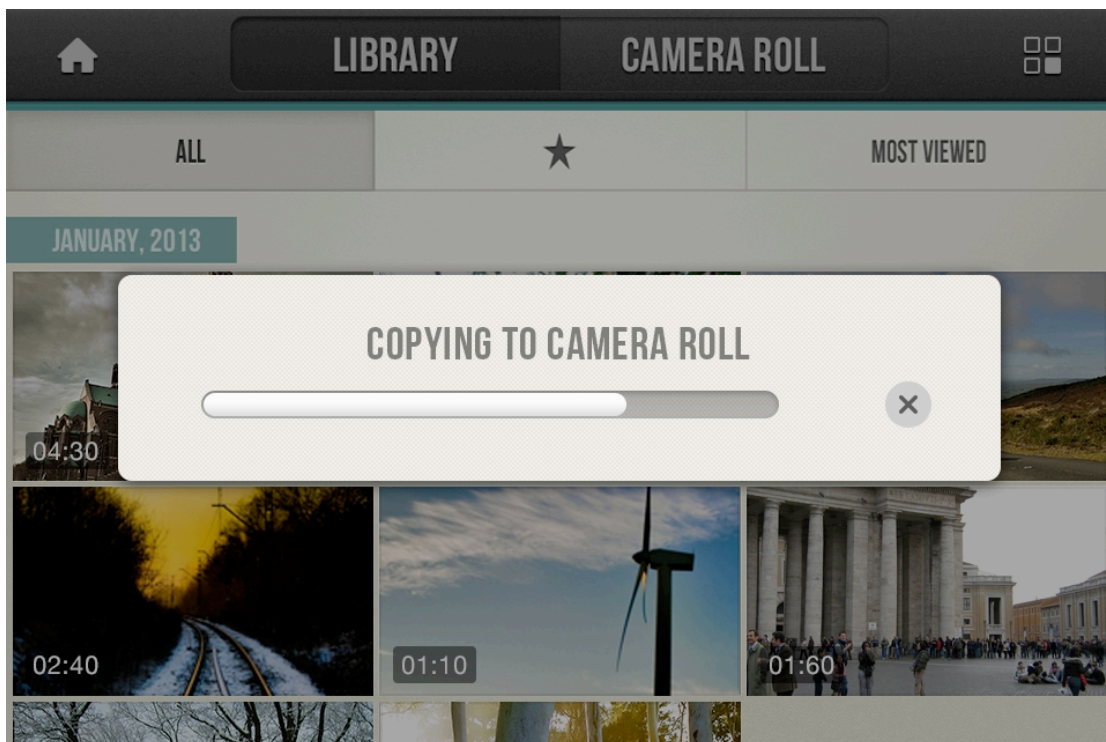

Q I have captured and gamed a video. Now I can't find it in my iPhone library.

Game Your Video stores all captured and gamed videos in a personalized library called Media Library. You can later sync required videos to iPhone's Camera Roll and delete the copy from Media Library.

Q How do I save my videos from the app to Camera Roll or to computer?

Transferring videos is a simple process:

1. Sync required videos from Media Library to your iPhone's Camera Roll library.

2. Now connect your iPhone to your computer.
3. Import necessary videos from Image Capture or iPhoto if you are a Mac user or directly copy Camera Roll videos if you are a Windows user.
4. Now delete synced videos from Media Library of the app, since there is already a copy present in Camera Roll.

Q Game Your Video just does not work for me. How can I remove it?

Game Your Video can be deleted from your iPhone directly by long-press on the icon and tapping the Red-color **Remove** button.

Please remember to sync all required videos from Media Library to iPhone's Camera Roll before deleting the app; else you will lose them.

However, please let us know what your expectations were, before deleting the app.

Q What other languages is Game Your Video available in?

Game Your Video is available only in English. Other languages will be included soon.

Q I need to watch some gamed/edited videos. Where should I go?

To start with, you can watch demo videos on our [website](#).

However, if you want to watch some cool and interesting gamed videos, tap on the following YouTube link <http://www.youtube.com/GameYourVideo>.

Don't forget, there are thousands of user-uploaded videos on our community too.

Q I have some feedback, suggestion or comments.

Your comments and suggestions are valuable to us. Please drop us a mail to gameyourvideo@globaldelight.com and we will happily respond to you. You can also contact us at <http://www.globaldelight.com/contactus.php>.

You can also send us a mail using the app directly, by going to **Settings > About** page and tapping on the **Contact Support** link.
